WHAT IS CLAIMED IS:

5   1.   An information processor comprising:
     a control information retrieving part
retrieving control information that is used to
execute a program;

10   a destination defining part defining
destination address information ;
     a moving part moving the program in
accordance with the destination address information;
and

15   a control information changing part
changing the control information based on the
destination address information.

20

2.   The information processor as claimed
in claim 1, wherein said control information
comprises current address information indicating

25   where the program is stored in a storage device, and
     wherein said control information changing
part comprises a replacing part replacing the
current address information with the destination
address information to which the program is moved.

30

3.   The information processor as claimed
35   in claim 1, wherein said control information is
generated when said program is installed into a
storage device.

Sub Cl 7

4.   The information processor as claimed in claim 1, wherein said control information is referred to when said program is executed.

`c`

5.   The information processor as claimed in claim 1, wherein said control information is stored in a file referred to by other programs, and the file includes a plurality of control information to execute the other programs.

6.   The information processor as claimed in claim 1, wherein said control information comprises definition information including at least one destination address information related to the program and including at least one definition name uniquely assigned to the destination address information, and

wherein said control information changing part comprises a changing part changing said control information based on said definition information.

Sub B2

7.   The information processor as claimed in claim 1, wherein said control information comprises:

current address information indicating where the program is stored in a storage device;

definition information including at least one destination address information related to the program and including at least one definition name uniquely assigned to the destination address information,

wherein said moving part comprises:

a copying part retrieving the current address information corresponding to said definition name included in said control information in accordance with said definition information and copying all information, which is stored at a current address indicated by the current address information, in accordance with the destination address information; and

a deleting part deleting all information stored at the current address, and

wherein said control information changing part comprises:

a changing part changing the current address information included in said control information based on the destination address information included in said definition information.

8. The information processor as claimed in claim 1, wherein said control information comprises:

program information to execute the program; and

data information related to data created or edited by executing said program, and

wherein said moving part comprises:

a program moving part moving the program;

Sub Cl 7 and M

      a data moving part moving the data when the program is moved by said program moving part.

5

      9. The information processor as claimed in claim 1, further comprising an installing part

10   installing said program.

Sub A3

15   10. A method for processing information comprising the steps of:

      (a) retrieving control information that is used to execute a program;

      (b) defining destination address

20   information;

      (c) moving the program in accordance with the destination address information; and

      (d) changing the control information based on the destination address information.

25

Sub B4

      11. The method as claimed in claim 10,

30   wherein said control information includes current address information indicating where the program is stored in a storage device, and

      wherein said step (d) comprises the step of replacing the current address information with

35   the destination address information to which the program is moved.

Sub C'

12. The method as claimed in claim 10,
5 wherein said control information is generated when
said program is installed into a storage device.

10

13. The method as claimed in claim 10,
wherein said control information is referred to when
said program is executed.

15

14. The method as claimed in claim 10,
wherein said control information is stored in a file
20 referred to by other programs, and the file includes
a plurality of control information to execute the
other programs.

25

Sub B5

15. The method as claimed in claim 10,
wherein said control information comprises
30 definition information including at least one
destination address information related to the
program and including at least one definition name
uniquely assigned to the destination address
information, and
35 wherein said step (d) comprises the step
of changing said control information based on said
definition information.

5   16. The method as claimed in claim 10,
wherein said control information comprises:
     current address information indicating
where the program is stored in a storage device;
     definition information including at least
10 one destination address information related to the
program and including at least one definition name
uniquely assigned to the destination address
information,
     wherein said step (c) comprises the steps
15 of:
     retrieving the current address information
corresponding to said definition name included in
said control information in accordance with said
definition information
20   copying all information, which is stored
at a current address indicated by the current
address information, in accordance with the
destination address information; and
     deleting all information stored at the
25 current address, and
     wherein said step (d) comprises the steps
of:
     changing the current address information
included in said control information based on the
30 destination address information included in said
definition information.

35

     17. The method as claimed in claim 10,
wherein said control information comprises program

information to execute the program and data information related to data created or edited by executing said program, and

5   wherein said step (c) comprises the steps of:

moving the program; and
moving the data when the program is moved.

10

18.   The method as claimed in claim 10, further comprising the step of installing said program.

15

19.   A computer-readable recording medium
20   recorded with a program code for causing a computer to process information, said program code comprising the codes for:

(a) retrieving control information that is used to execute a program;
25   (b) defining destination address information;

(c) moving the program in accordance with the destination address information; and

(d) changing the control information based
30   on the destination address information.

35   20.   The computer-readable recording medium as claimed in claim 19, wherein said control information includes current address information

indicating where the program is stored in a storage
device, and

    wherein said code (d) comprises code for
replacing the current address information with the
5 destination address information to which the program
is moved.

Sub for 7

    21.   The computer-readable recording
medium as claimed in claim 19, wherein said control
information is generated when said program is
installed into a storage device.
15

    22.   The computer-readable recording
20 medium as claimed in claim 19, wherein said control
information is referred to when said program is
executed.

25

    23.   The computer-readable recording
medium as claimed in claim 19, wherein said control
information is stored in a file referred to by other
30 programs and the file includes a plurality of
control information to execute the other programs.

35 Sub B8

    24.   The computer-readable recording
medium as claimed in claim 19, wherein said control

information comprises definition information
including at least one destination address
information related to the program and including at
least one definition name uniquely assigned to the
5   destination address information, and

wherein said code (d) comprises the code
for changing said control information based on said
definition information.

10

25.   The computer-readable recording
medium as claimed in claim 19, wherein said control
15   information comprises:

current address information indicating
where the program is stored in a storage device;

definition information including at least
one destination address information related to the
20   program and including at least one definition name
uniquely assigned to the destination address
information,

wherein said code (c) comprises the codes
for:
25   retrieving the current address information
corresponding to said definition name included in
said control information in accordance with said
definition information

copying all information, which is stored
30   at a current address indicated by the current
address information, in accordance with the
destination address information; and

deleting all information stored at the
current address, and
35   wherein said code (d) comprises the code
for:

changing the current address information

included in said control information based on the
destination address information included in said
definition information.

5

26. The computer-readable recording
medium as claimed in claim 19, wherein said control
10 information comprises program information to execute
the program and data information related to data
created or edited by executing said program, and
wherein said code (c) comprises the codes
for:
15   moving the program; and
moving the data when the program is moved.

27. The computer-readable recording
medium as claimed in claim 19, further comprising
the code for installing said program.
